

#### **NUC029FAE CMSIS BSP Directory**

Directory Introduction for 32-bit NuMicro<sup>™</sup> Family

#### **Directory Information**

Document	Driver reference manual and revision history.
Library	Driver header and source files.
SampleCode	Driver sample code.

#### **1 Document Information**

CMSIS.html	Document of CMSIS version 4.5.0
NuMicro NUC029FAE CMSIS BSP Revision History.pdf	This document shows the revision history of NUC029FAE BSP.
NuMicro NUC029FAE Driver Reference Guide.chm	This document describes the usage of drivers in NUC029FAE BSP.

# 2 Library Information

CMSIS	Cortex <sup>®</sup> Microcontroller Software Interface Standard (CMSIS) V4.5.0 definitions by ARM <sup>®</sup> Corp.
Device	CMSIS compliant device header file.
StdDriver	All peripheral driver header and source files.

## **3 Sample Code Information**

Hard_Fault_Sample	Show hard fault information when hard fault happened.
NuTiny-NUC029FAE	Sample code for NUC029FAE Tiny Board
RegBased	Sample code implemented without access standard library but access registers directly.
Semihost	Show how to print and get character with IDE console window.
StdDriver	Demonstrate the usage of NUC029FAE MCU peripheral driver APIs.
Template	A project template for NUC029FAE MCU.

## 4 \SampleCode\NuTiny-NUC029FAE

LED	Toggle P2.4 to turn on / off the board LED.
-----	---

## 5 \SampleCode\RegBased

ACMP	Demonstrate Analog comparator (ACMP) comparison by comparing CPP0 (P1.5) with VBG voltage and shows the result on UART console.
ACMP_TriggerTimerCapture	Show how to use Analog comparator (ACMP) state change to trigger timer capture function. P1.5 is used as comparator positive input and VBG as negative input.
ADC_Convert	Demonstrate ADC function by repeatedly convert the input of ADC channel 5 (P1.5) and shows the result on UART console.
FMC_RW	Show FMC read Flash IDs, erase, read, and write function.
GPIO	Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.
I2C_Interrupt_EEPROM	Read/write EEPROM via an I <sup>2</sup> C interface.
PWM_DoubleBuffer	Demonstrate the PWM double buffer feature.
SPI_LoopBack	Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).
Timer_Periodic	Use the timer periodic mode to generate timer interrupt every 1 second.
Timer_TriggerCountingMode	Use the timer pin P3.2 to demonstrate timer trigger counting mode function. And displays the measured input frequency to UART console.
UART_IrDA	Show how to transmit and receive UART data in UART IrDA mode.
UART_LIN	Demonstrate how to transmit LIN header and response.
UART_TxRx_Function	Transmit and receive data from PC terminal through RS232 interface.
WDT_Polling	Use Polling mode to check WDT time-out state and reset WDT after time-out occurs.

#### 6 \SampleCode\StdDriver

ACMP Demonstrate Analog comparator (ACMP) comparison by comparing CPP0 (P1.5) with VBG voltage and show the result on UART console.  ADC_Compare Demonstrate ADC conversion and comparison function by monitoring the conversion result of channel 0.  This sample code includes LDROM image (fmc_ld_iap) and APROM image (fmc_ap_main).  It shows how to branch between APROM and LDROM. To run this sample code, the boot mode must be "Boot from APROM with IAP".  FMC_RW Show FMC read Flash IDs, erase, read, and write function.  Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.  I2C_Interrupt_EEPROM Read/write EEPROM via an IPC interface.  PWM_DeadZone Demonstrate the dead-zone feature with PWM.  SPI_LoopBack Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  SYS Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.  Timer_ToggleOut Demonstrate the timer 0 toggle out function on pin P3.4.		
by monitoring the conversion result of channel 0.  This sample code includes LDROM image (fmc_ld_iap) and APROM image (fmc_ap_main).  It shows how to branch between APROM and LDROM. To run this sample code, the boot mode must be "Boot from APROM with IAP".  FMC_RW  Show FMC read Flash IDs, erase, read, and write function.  Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.  I2C_Interrupt_EEPROM  Read/write EEPROM via an I²C interface.  PWM_DeadZone  Demonstrate the dead-zone feature with PWM.  SPI_LoopBack  Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  SYS  Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay  Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	ACMP	comparing CPP0 (P1.5) with VBG voltage and show the
and APROM image (fmc_ap_main).  It shows how to branch between APROM and LDROM. To run this sample code, the boot mode must be "Boot from APROM with IAP".  FMC_RW  Show FMC read Flash IDs, erase, read, and write function.  Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.  I2C_Interrupt_EEPROM  Read/write EEPROM via an I <sup>2</sup> C interface.  PWM_DeadZone  Demonstrate the dead-zone feature with PWM.  SPI_LoopBack  Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  SYS  Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay  Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	ADC_Compare	
To run this sample code, the boot mode must be "Boot from APROM with IAP".  Show FMC read Flash IDs, erase, read, and write function.  Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.  IZC_Interrupt_EEPROM Read/write EEPROM via an I²C interface.  PWM_DeadZone Demonstrate the dead-zone feature with PWM.  SPI_LoopBack Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  SYS Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter Use the timer pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.		
function.  Use GPIO driver to control the GPIO pin direction, control their high/low state, and how to use GPIO interrupts.  I2C_Interrupt_EEPROM Read/write EEPROM via an I²C interface.  PWM_DeadZone Demonstrate the dead-zone feature with PWM.  SPI_LoopBack Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  SYS Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	FMC_IAP	To run this sample code, the boot mode must be "Boot
control their high/low state, and how to use GPIO interrupts.  I2C_Interrupt_EEPROM  Read/write EEPROM via an I2C interface.  PWM_DeadZone  Demonstrate the dead-zone feature with PWM.  SPI_LoopBack  Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay  Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	FMC_RW	
PWM_DeadZone  Demonstrate the dead-zone feature with PWM.  SPI_LoopBack  Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay  Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	GPIO	control their high/low state, and how to use GPIO
SPI_LoopBack  Demonstrate SPI function by connect MOSI (P0.5) with MISO (P0.6).  Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay  Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	I2C_Interrupt_EEPROM	Read/write EEPROM via an I <sup>2</sup> C interface.
SYS  Demonstrate how to get PDID, get and clear reset source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Timer_EventCounter  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	PWM_DeadZone	Demonstrate the dead-zone feature with PWM.
source, configure BOD, and output system clock to CKO pin with the system clock / 4 frequency.  Timer_Delay  Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	SPI_LoopBack	
Timer_EventCounter  Use the pin P3.4 to demonstrate timer event counter function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	SYS	source, configure BOD, and output system clock to CKO
Timer_EventCounter  function.  Use the timer pin P3.2 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.	Timer_Delay	
Timer_FreeCountingMode counting mode function. Also display the measured input frequency to UART console.	Timer_EventCounter	·
Timer_ToggleOut Demonstrate the timer 0 toggle out function on pin P3.4.	Timer_FreeCountingMode	counting mode function. Also display the measured input
	Timer_ToggleOut	Demonstrate the timer 0 toggle out function on pin P3.4.

UART_IrDA	Show how to transmit and receive UART data in UART IrDA mode.
UART_TxRx_Function	Transmit and receive data from PC terminal through RS232 interface.
WDT_Wakeup	Use WDT to wake up system from Power-down mode periodically.

#### **Important Notice**

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

Please note that all data and specifications are subject to change without notice.

All the trademarks of products and companies mentioned in this datasheet belong to their respective owners.
